

User Story 1: David the movie guy
He usually makes physical lists but would like an online. But as a movie connoisseur, he wants to convert his list into a digital one so he can organize and keep track of his list a lot more conveniently.

David logs on to our website to transfer the data from the physical list to a digital list

David differentiates between movies and tv shows when inputting the data from his physical list

User Story 2: Kara the person who keeps forgetting her friends' recommendations
Kara's friend Tiffany wants her to watch "The Office." Kara agreed ten months ago and still hasn't gotten started on it, because she has so much other stuff to watch. Tiffany is disappointed because she wants to talk to Kara about the show.

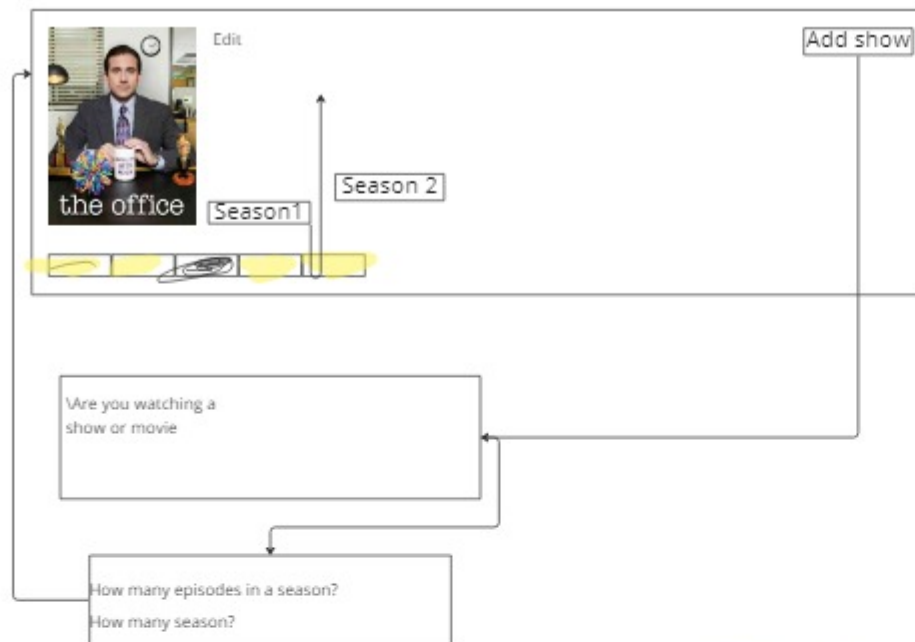

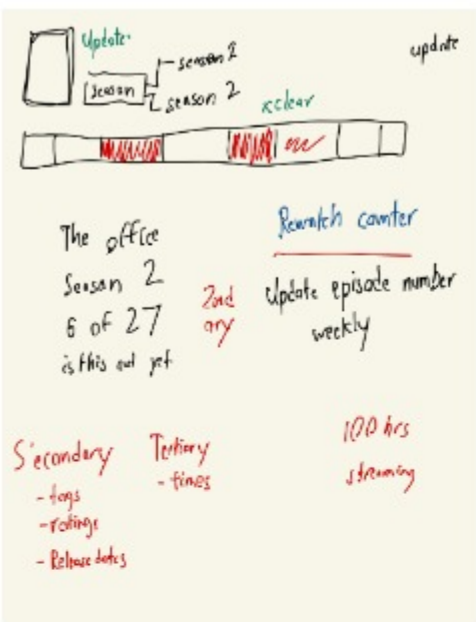

Kara logs onto our website and adds "The Office." The act of adding it helps her remember to watch the show. Also, if she adds other shows to website, she will be able to see all of them easily the next time she comes to the website.

Kara no longer forgets to watch "The Office" and has many fun discussions with Tiffany.

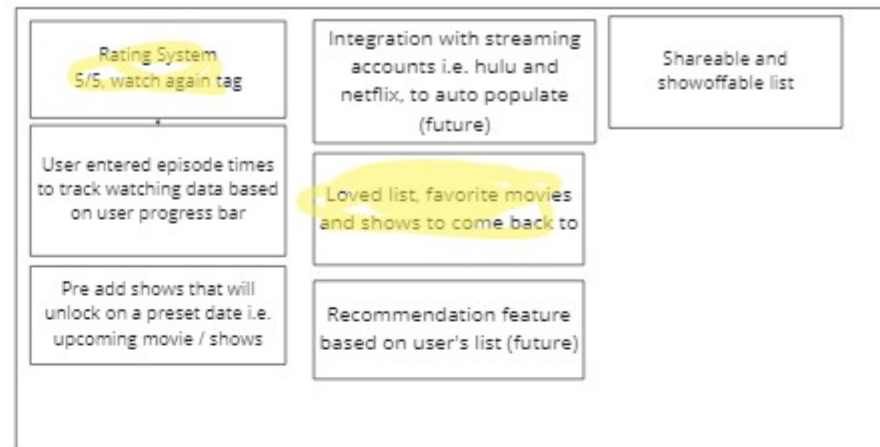

User Story 3: Felix a film reviewer
Felix's job is to review films and write about each film and share them on YouTube. He used to use word to record the highlights of each film and review tips.

He found word very difficult to use and had to do a lot of the formatting and layout himself. So he wanted to find a good app that could record the moments of a film and add his own reviews.

After using our app he no longer needs to use word to lay out complicated content himself. He can easily keep track of every film and content he has reviewed on the app

Free Printable Calendars from [Typescalendar.com](https://typescalendar.com)

Mission Statement: many people today suffer from some sort of depression whether it is a minor or major form. Many of these minor forms of depression can be relieved by simply just thinking to the root of the situation of what is causing that depressing mood. On the contrary, if something in an individual's day goes right and brings happiness then there might be something that went right in that persons day. By writing down and keeping track of these thoughts can help individuals better understand themselves and learn more about what makes them to get in certain moods and use it as a tool to to exit depression or anger and ensure to repeat certain activities which brings happiness. This will help the individual live a healthier and more full life.

What are we trying to solve with BingeTracker? What are we providing to users

A convenient way to sort and arrange shows and movies to watch

There are too many streaming services, each with their own list and movies to watch, <BingeTracker> will serve as a repository to save and store these shows in a central location, not confined to the watch lists associated with each streaming service. This way, users can properly organize their movies/shows list in the way to their convenience, without having to rely on feeble memory or the lack of convenience generally present with physical lists

BingeTracker will also serve as a goal tracker, not only letting you know what shows your watching, but where you are at in those shows, keeping you constantly aware of your progress and priorities

User Story 1: Felix is a person who likes to record his life,
He uses a diary to write journals every day. Recently he listened to the environmental propaganda and wanted to save paper by recording journals electronically.

Felix uses our website to keep track of his life and has found that there are many emoticons in the website to keep track of his mood.

It not only saves paper, but also makes journals more interesting and informative.

- For those TV series that are still being updated. Users can set when the next episode of a TV series will be updated and the app can create a weekly TV series update calendar to remind users which TV series are updated with new episode
